

## Product Announcement

### MantroShield: A New, Fat-Free Line of Encapsulated Food Acids- From Mantrose

Mantrose-Haeuser Co., Inc. (Westport, CT) is introducing fat-free encapsulated acid crystals to potentiate the sour flavor of gummies, licorice, and gummy vitamin products in a more health conscious format. The MantroShield citric, malic, and other food acids incorporate leading-edge coatings technology and are designed to tackle common quality issues associated with confectionery product formulations including sugar inversion, hygroscopicity, crystal disappearance, moist surfaces, along with color and flavor changes. The fat-free food acids including MantroShield CA100 and MantroShield MA200 are highly stable and often afford reduced coating weight, delivering a quick, clean acid flavor release while allowing for lower overall sanding usage levels. Call or email us for samples.
